Elements Leg Finishes

Teak

Our wood legs are made from sustainably harvested solid teak. This material was selected for its natural beauty and exceptional resistance to weathering, rotting and pests. Teak is a heavy and dense wood that provides strength and stability for outdoor durability. Select this finish for its color, but also for its durability to the elements. Can be used in properties near the ocean. When you select teak legs we make sure to pair it with stainless steel hardware for durability.

Teak requires minimal maintenance as it contains natural oils that make it highly water-resistant. Overtime teak ages into a grey color, or alternatively it can be maintained with teak oil to maintain its warm golden color.

Powder Coated Steel (Charcoal)

This sleek matte finish pairs beautifully with the design of our Elements furniture; the charcoal finish that is modern and neutral. Our super durable lead and TGIC-free powder coating is designed to meet the most stringent outdoor environments.

Maintenance is easy with our powder coated finish.

Marine Grade Stainless Steel

Shaped into our minimalist rounded shaped legs, the brushed marine grade stainless steel complements our modern furniture beautifully with its matte finish. This material has exceptional properties that will resist corrosion, rust and discoloration even in coastal or marine environments.

Stainless steel is easy to clean and does not require complicated maintenance over time.
